Project Experience

MSc Thesis Project

- 2016-2017 **Turing Learning with Nash Memory** *UvA, NL*
- Supervisors Dr. Frans Oliehoek (TU Delft), Dr. Roderich Gross (Sheffield), Dr. Leen Torenvliet (ILLC)
- Abstract Turing Learning is a method for the reverse engineering of agent behaviors. Nash memory is a memory mechanism for coevolution which guarantees monotonicity in convergence. This thesis explores the integration of such memory mechanism with Turing Learning for faster learning of agent behaviors. We employ the Enki robot simulation platform and learns the aggregation behavior of epuck robots.

BSc Thesis Project

- 2013-2014 **RNA secondary structure prediction with SAT/SMT Solvers** *U.Manchester, UK*
- Supervisor Dr. Konstantin Korovin
- Abstract The project aimed at predicting RNA secondary structure using a new logic based approach taking full advantage of two state-of-the-art reasoners : Z3 and SAT4J. We encoded energy constraints and structural constraints. The solution corresponds to a prediction of the RNA secondary structure.
