Project Experience

Research Projects

2025-2029 **GeoTransQuData Project (funded by ERC)**

UU, NL

Supervisor Dr. Simon Scheider

- Summary GeoTrAnsQuData introduces a new way to answer geographic questions: instead of searching for existing maps or manually analysing them, we enable users to generate answers by transforming available geodata sources. I work on the reasoning engine and contribute to the workflow construction, dataset annotation, and various tasks in NLP.
- 2022-2024 **The FAIR Expertise Hub Project (funded by PDI-SSH)** *VU, NL*
- Supervisors Prof. Jacco van Ossenbruggen, Dr. Ronald Siebes, and Dr. Tobias Kuhn
- Summary The full name of the project is “Building a FAIR Expertise Hub for the social sciences”. In this project, we develop FAIR Implementation Profiles and study how we can use them to help communities in social science and humanities make their data more FAIR. A use case project we collaborated with the Open Science team of the University Library won the Open Science Community Awards (OSCA) in 2024. Members of the project include Angelica Maineri, Tobias Kuhn, Ronald Siebes, etc.
- 2017-2022 **The MaestroGraph Project (funded by NWO)** *VU, NL*
- Lead Prof. Frank van Harmelen
- Summary My PhD is a part of the NWO-funded MaestroGraph project. The project investigates how the meaning of a knowledge graph is affected by its structure. We design algorithms that exploit the graph structure for the effective refinement of very large, integrated knowledge graphs. Methods were attempted and adapted for smaller knowledge graphs for specified domain applications.
- Thesis Project**
- 2025-2026 **MBA Thesis: Assessing Data Infrastructures** *VU, NL/UniMiB, IT*
- Supervisor Dr. Enrico Guarini
- Advisor Dr. Ronald Siebes (VU), Pedro Hernández Serrano (UM), and Andrea Tarallo (CNR-IRET, IT)
- Summary The project performed an assessment on the maturity and long-term sustainability through applying a newly designed assessment framework, namely the Data Infrastructure Maturity Profile (DIMP). The DIMP was brought into action through collaboration with ODISSEI, AUSSDA, LifeWatch Italy, PURE3D, and Maastricht University. Some comparative analysis of business models, implementation specifications, and various aspects of maturity was included, followed by some discussion.
- 2016-2017 **MSc Thesis: Turing Learning with Nash Memory** *UvA, NL*
- Supervisors Dr. Frans Oliehoek (TU Delft), Dr. Roderich Groß (Sheffield), Dr. Leen Torenvliet (ILLC)
- Summary Turing Learning is a method for the reverse engineering of agent behaviors. Nash memory is a memory mechanism for coevolution which guarantees monotonicity in convergence. This thesis explores the integration of such a memory mechanism with Turing Learning for faster learning of agent behaviors. We employ the Enki robot simulation platform and learn the aggregation behavior of E-puck robots.
- 2013-2014 **BSc Thesis: RNA secondary structure prediction with SAT/SMT Solvers** *U.Manchester, UK*
- Supervisor Dr. Konstantin Korovin
- Summary The project aimed to predict the secondary structure of RNA using a new logic-based approach that takes full advantage of two state-of-the-art reasoners: Z3 and SAT4J. We encoded energy constraints and structural constraints. The solution corresponds to a prediction of the secondary structure for each input RNA sequence.
- Other Research Projects**
- Jan 2016 **Symbolic Model Checking for the μ -Calculus** *U. Twente, NL*
- Supervisor Prof. Jaco van de Pol
- Jan 2016 **Deontic Logic Research Project** *ILLC, UvA, NL*
- Supervisor Dr. Roberto Ciuni (ILLC & University of Padova)
